The above ratings represent the engine performance capabilities to conditions specified in ISO 8528-1, ISO 3046/1:1986, BS 5514/1. Derating may be required for conditions outside these; consult Perkins Engines Company Limited. Generator powers are typical and are based on typical alternator efficiencies and a power factor (cos θ) of 0.8.

Rating Definitions: **Prime Power**: Power available at variable load in lieu of a main power network. Overload of 10% is permitted for 1 hour in every 12 hours operation. **Standby (maximum)**: Power available at variable load in the event of a main power network failure. No overload is permitted.
